- **Max Score: 30 Points**

Super Hero

You have given a string `name` of user. The user gives his name as to you and your task is to return string `"name" is a Super Hero.`

You have to complete `ModifyName` function which consists of single string `name` as input and return the string as mentioned above as output

Input Format

The first line of input contains a string.

Output Format

Print "name" is a Super Hero

Example 1

Input

`Accio`

Output

`Accio is a Super Hero`

Explanation

Output is formed as "Accio" (name) is a Super Hero

Example 2

Input

```
Main
```

Output

```
Main is a Super Hero
```

Explanation

Output is formed as "Main" (name) is a Super Hero

Constraints

```
1 <= |str| <= 100
```

Note

You do not have to worry about classes and objects for now; just keep that abstract. We will cover everything related to classes and objects in Module 2. For the time being, understand the syntax only. This is only shown to you so that you can be able to complete the function of the question given to you in the contest; otherwise, there is no need to create a different class to solve the questions using the function.
