- **Max Score: 30 Points**

Input / Output in Java

In this challenge, you will learn to read input for the first time. The most popular way to read input in java is by using `Scanner`.

For example:

```
Scanner scanner = new Scanner(System.in);
int myInt = scanner.nextInt();
```

For printing it

```
System.out.println( myInt);
```

The code above creates a Scanner object named scanner and uses it to read an integer. It prints output using `System.out.println(MyInt)`. So, if our input is:

5

Our code will print:

5

In this challenge, you must read 3 integers and then print them. Each integer must be printed on a new line.

Input Format

There are 3 lines of input, and each line contains a single integer.

Output Format

3 lines of output, each line containing a single integer

Example 1

Input

```
42
100
125
```

Output

```
42
100
125
```

Example 2

Input

```
452
105
25
```

Output

```
452
105
25
```

Constraints

1 <= integer <= 10^9

My code

```java
// n java
import java.util.*;
import java.lang.*;
import java.io.*;

public class Main
{
    public static void main (String[] args) throws
java.lang.Exception
    {
        //System.out.println("Hello World");
        Scanner scanner = new Scanner(System.in);
    int n = scanner.nextInt();
        int m = scanner.nextInt();
        int p = scanner.nextInt();
        System.out.println(n);
        System.out.println(m);
        System.out.println(p);
    }
}
```
